

Regentex®

J. T. Inglis & Sons Ltd has a wealth of textile history, having been founded in 1917 in Dundee, Scotland. Now part of the British Millerain Group, the company maintains its family run ownership, whilst benefitting from being part of a larger textile focussed group. JTI is renowned for its quality trademark products in the UK, but has also established a global reputation as a leading manufacturer and supplier of specialist canvas, for both industrial and military purposes.

British Millerain has been manufacturing specialist textiles in the UK since 1880, using skills handed down through six generations of the Miller family. Improving finishing capabilities with customisation through more than a century of refinement and testing. In 1893 they filed for their first global patent for weather-proofing cotton, they have continued to invest in new technologies and have expanded their capabilities to address the ever changing demands of the textile industry; from the extremes of life in the armed forces, to leisurely country pursuits and high-end fashion.

Their commitment to quality has allowed them to develop trusting and lasting partnerships with many of the industry's leading brands, and have driven their growth over the decades into a globally respected textile manufacturer

They operate 100% inspection of fabrics and each batch is subject to a comprehensive range of tests prior to despatch to customers. Testimony to this is their approval rating as a

Regentex®

primary contractor to the UK Ministry of Defence and accreditation to BS EN ISO 9001 for manufacturing quality capabilities.

Regentex® Canvas: a 52%:48% polyester cotton blended base fabric woven in India exclusively to JTI specifications, with a construction which gives high strength to low weight ratio. The cotton element gives breathability whilst the polyester gives the fabric its strength.

The base fabric is then shipped to British Millerain for proofing, dyeing and finishing with a rot and water resistant treatment, following this each batch is tested to ensure it passes the specification requirements and then shipped to New Zealand.

Regentex® is well known for its use in the traditional horse rug market with demand for this application growing through the 1900s – it is specifically imported into New Zealand by Reid and Twiname Ltd, a company established in 1923 and exclusively used to manufacturer premium horse wear in harsh weather conditions.

It has excellent properties for resistance to abrasion and mechanical damage as well as degradation from long-term exposure to light. The dry-chemical finishing process has been customised to render the fabric breathable, unlike many coated products. This eliminates sweating problems and gives a host of functional benefits. It is also extensively used in the haulage industry and architecture and construction – being resistant to deformation and extension under tension.

Regentex® is available in 12oz, 15oz, 18oz and 24oz in Blue and Green and is also available Natural 12 and 15oz.

Regentex[®]

Features and Benefits

Polyester Cotton blend giving high strength to low weight ratio

Longer life without the penalty of heavy weight easy and economical to handle

Rip stop weave creating high tear strength

*Great durability and resistance to damage
Any damage minimised*

Specialised high quality finish

Fabric breathes, keeping condensation to the minimum

Fully tested with water resistance to British Standard Specifications

Effective protection from weather

Range of weights to suit the job precisely

The flexibility to meet virtually any requirement with the right product
